
Post-doc position in molecular immunology

A post-doc position is available in the Molecular Immunology lab at the Institute for Research in Biomedicine (IRB) in Bellinzona, Switzerland (www.irb.usi.ch/molecular-immunology), to join projects aimed at understanding mechanisms of regulation of gene expression in immune-mediated processes.

Have you recently obtained a PhD degree in a field related to immunology or molecular biology? Are you fluent in spoken and written English? Are you highly motivated and excited about learning new skills and developing independent thinking? Please apply!

The research topic concerns the study of transcriptional and post-transcriptional regulation of gene expression in cells of the immune system. The general goal is to extend our knowledge of the mechanisms that regulate immune cell differentiation and functions. The exact project will be defined after discussion and based on mutual interests.

With access to state-of-the-art facilities and a vibrant environment that favors the exchange of knowledge and ideas through journal clubs, seminars and talks, you will have the opportunity to address mechanistic questions relevant to immune responses. The lab is funded by the Swiss National Science Foundations (SNSF) and other grants. Salaries are in line with the recommendations of the SNSF, and preferred starting date is in the Summer-Fall 2022.

Applications

Applications will be evaluated as they are received and until the position is filled. Please send a single pdf file by email to silvia.monticelli@irb.usi.ch, including the following:

- a motivation letter including a statement of research interests
- CV including degree(s) with grades of final examinations and a publication list
- Names of two referees.
